NGO Name: Animal Welfare Analytics

SQL Database Project

Hina Haq · Gabriela Cascione · Husseim Stuck

IronHack Data Analytics Bootcamp · 2026

Major Obstacle

The Obstacle

- The dataset contained **~170K** rows, making SQL **imports slow and initially problematic**. Messy data formats and NULLS caused only ~4K rows to load successfully on the first attempts.
- **Import time** 40 minutes
- A missing .gitignore also led to **push conflicts** that delayed collaboration.
- By the end of the project day, the team was running on stress and fumes.

What We Learned

- Always c**heck and clean the dataset** before importing. Pre-cleaning was necessary to fix inconsistent formatting, missing values, and invalid records, troubleshooting focused on improving data quality first, rather than forcing the full raw dataset into the database.
- Always **check parameters** before and after import to confirm all rows transferred correctly.
- Ensure all contributors have a **.gitignore** file set up before the first commit.
- Having supportive and empathetic peers to work with lead to more resilience and better results.

Database Design & Data Transformation

Data Acquisition, Enrichment & Examination

01 Are **black cats** adopted less than other cats?

Hypothesis: **Black cats** will have a **lower adoption rate** compared to cats of other coat colours, due to well-documented **adoption bias** against black animals in shelters.

02 Which animals are being adopted the least?

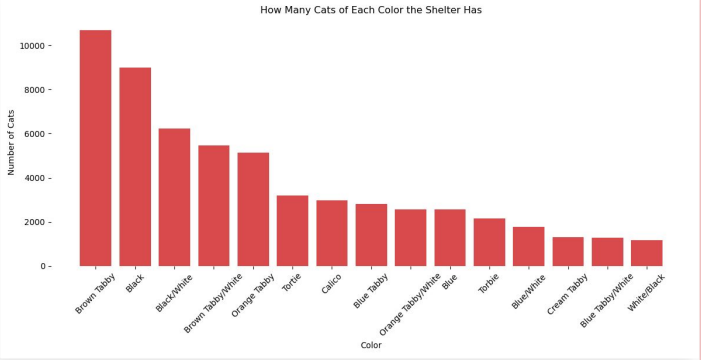
Hypothesis: **Less common animal types** (birds, livestock, other) will have significantly lower adoption rates than dogs and cats.

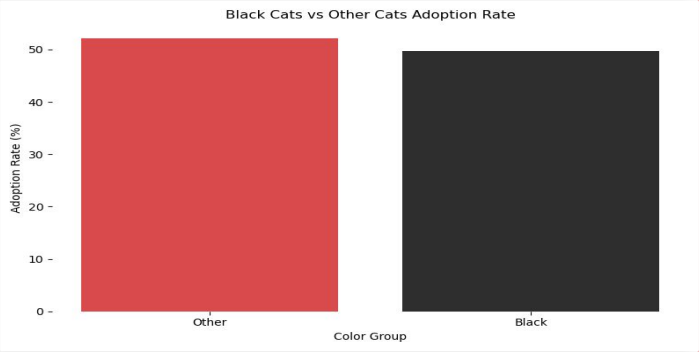
03 What is the average age of adoption per animal type?

Hypothesis: Cats and dogs will be **adopted at a younger age** on average than other animal types, as **younger animals are generally more desirable** to adopters.

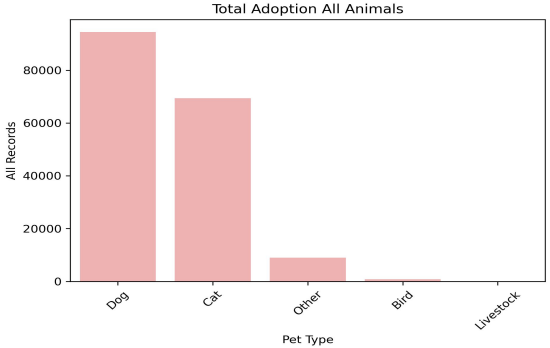
Data Acquisition, Enrichment & Examination

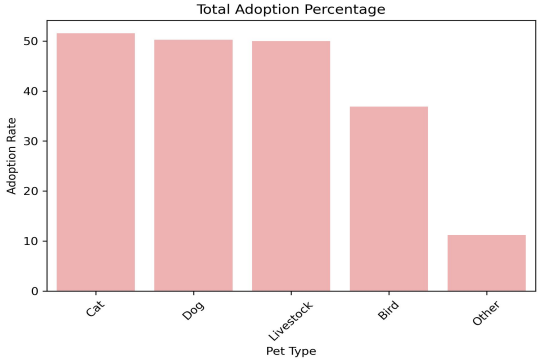
01 Are black cats adopted less than other cats?





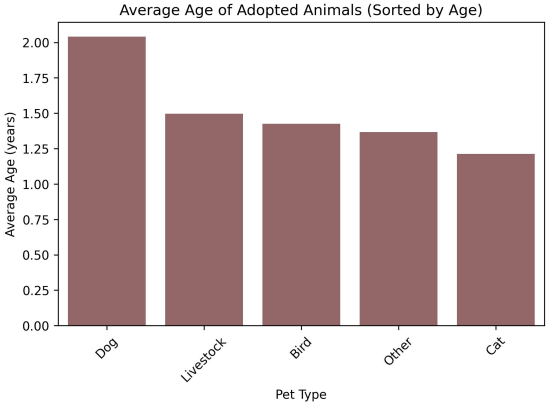
02 Which animals are being adopted the least?





03 What is the average age of adoption per animal type?

All Animals	Total Adoption	Adoption %
173720	84598	48.70



“The shelter crisis is clear: only 48% of animals find homes, with a mere 2% gap between cats and dogs, while age bias dooms seniors and young alike. Data demands action: smash preferences, save the overlooked, and ensure no life is left behind.”

Thank You
